## Avangreen awarded with a 2,2 million \$ engineering and construction contract of energy plants for gas extraction wells

Avangreen will build energy plants to supply energy for twenty-five gas extraction wells built by the Spanish Multinational “Técnicas Reunidas”.

The project implies the engineering and construction of energy plants based on solar photovoltaic technology as well as storing and advanced control systems. The technical solution designed by Avangreen engineers satisfies the off-grid energy availability requirements specified by the customer with extreme weather conditions in the Algerian desert.

The project, valued in 2,2 million \$, will be fully delivered in 2015.

### **ABOUT AVANGREEN**

*Avangreen is a multinational, private and independent company that aims at helping public and private institutions in the development and implementation of their sustainability strategies, energy efficiency and clean development.*

*Avangreen is a partner able to maximize the operational and financial performance of infrastructure and energy projects, from a perspective of global service, integrating design, promotion, development, construction, operation and maintenance.*

*Avangreen is currently developing projects in Europe, Africa, Middle East and America.*
